Experience

Software Engineer, XaneAI January 2026 – Present

- Built a Terraform environment manager that provisions client environments (VPC, subnets, EC2, security groups) from a single TOML config, cutting delivery from **weeks of manual back-and-forth to same-day self-serve**
- Built a Go microservice streaming logs from AWS S3 to Loki at **3x Logstash throughput and 1.3 GB less memory**; exposed 10M+ API logs through Grafana dashboards
- Cut HTTP payloads **55%** and average response time **30ms** by enabling gzip in AWS API Gateway and Nginx across high-traffic endpoints
- Diagnosed recurring **5xx failures** on production API Gateway endpoints using CloudWatch logs, metrics and alarms

Software Engineer Intern, Yardstick April 2024 – November 2024

- Designed a distributed backend on AWS EC2 sustaining **500–1k req/s** at p90 latency under **50ms**
- Built CI/CD pipelines on GitHub Actions for automated testing and zero-downtime deployment, cutting the release cycle from **30 mins to under 2 mins**
- Engineered a Redis cache layer with LRU eviction and TTL strategy, cutting MongoDB query load **60%**, and integrated BullMQ async processing for 1k+ messages/min

Projects

LogCore, IoT Streaming (GKE, Terraform, Bigtable) ShubhamTiwary914/logcore-v2

- Provisioned **10+ GCP resources** (GKE, Bigtable, IAM, service accounts) via Terraform modules, enforcing zero-drift infrastructure state across environments
- Deployed microservices on GKE with VPA, readiness probes and container-optimized images; eliminated **OOM events** and cut average pod CPU **35%**
- Built an MQTT ingestion pipeline with Go workers processing **10k messages/min** and an Apache Beam ETL at under 5s device-to-Bigtable latency
- Configured **Prometheus Operator** with a Loki/Alloy stack for alerting on ingestion lag; shipped images and Helm charts through GitHub Actions CI/CD

Homelab Infrastructure (Linux, Nginx, CI/CD) ShubhamTiwary914/home-lab

- Run a **self-hosted GitHub Actions runner** that builds an Astro static site from Obsidian notes on every push, served through Nginx behind a Cloudflare Tunnel
- Deployed **cloudflared as a systemd daemon** with wildcard DNS routing across subdomains on a self-owned domain, exposing services without a public IP
- Configured an Nginx reverse proxy with bearer token authentication over a self-hosted LLM endpoint, **round-robin load balanced** across multiple Ollama instances

Technical Skills

Cloud: AWS (EC2, VPC, S3, IAM, API Gateway, Lambda, CloudWatch), GCP (GKE, Bigtable, Cloud Run)
IaC & CI/CD: Terraform, Docker, Kubernetes, Helm, GitHub Actions, Prometheus, Grafana, Loki
Linux & Networking: Linux administration, systemd, Nginx, reverse proxy, load balancing, DNS, TLS, Bash, Git
Languages & Data: Go, Python, JavaScript, Node.js, FastAPI, gRPC, MQTT, PostgreSQL, MongoDB, Redis

Education

Uttaranchal Institute of Technology, B.Tech in Computer Science August 2022 – July 2026

- GPA: 9.01/10.0. **Coursework:** Operating Systems, Computer Networks, Database Management Systems
